Education

RTM Nagpur University

Bachelor of Engineering in Information Technology – 8.7 CGPA

Jul 2017 – Jul 2021

Nagpur, Maharashtra

Experience

Manupatra Information Solutions Pvt Limited

Software Developer

Noida

Apr 2026 - Jun 2026

- Built Python-based solutions for legal research and document management platforms. Leveraged AI-assisted development tools (Claude and Cursor) to accelerate code development, debugging, documentation, and research.

Procloz Services Pvt Ltd.

Gurgaon

Junior Python Developer

March 2024 – Apr 2026

- Developed and maintained multiple web applications using Flask, resulting in improved user experiences and system efficiency.
- Led automation projects, including Lead Generator and Emailer to boost sales and marketing efficiency.
- Refined database schemas and queries, significantly improving data retrieval times and application responsiveness.

Associate Python Developer

Sept 2023 - Mar 2024

- Designed and implemented a comprehensive HR services product with Django, integrating front-end and back-end functionalities for streamlined HR processes.
- Created Standard Operating Procedures (SOPs) for Azure deployment, facilitating smooth product launches and consistent deployment practices.

Projects

Prople - HR Tech Platform

- Developed **core backend modules** for employee onboarding, offboarding, Excel reporting, and role-based access control (RBAC) to enforce secure, user-type-specific permissions.
- Designed and implemented a **Blueprint-based Flask architecture**, cleanly separating routes, service layers, and utility modules, improving scalability, maintainability, and team efficiency.
- Built a **Scheduler Module** using APScheduler to trigger **daily and weekly notifications** across the web application and email channels, automating recurring HR workflows.

PayGen – Payslip Generation and Bank File Automation

- Developed a **full-stack payroll automation module**, integrating backend services and user-friendly UI into a single cohesive platform.
- Automated end-to-end payslip generation, including Excel data ingestion, validation, and secure **SMTP** email delivery to employees.
- Designed and built Bank Payroll Module to generate globally compliant payroll **XML** files for international clients.
- Reduced manual payroll effort by **~40%** through automation scripts and reusable workflows, improving speed, accuracy, and operational efficiency.

Costen – Travel & Expense Management System

- Developed backend modules using **Django** for expense submission, receipt uploads, multi-layer approval workflows, and automated reporting, improving operational efficiency.
- Implemented validation and approval automation, reducing manual intervention across finance teams and ensuring accurate expense tracking.
- Designed and built Costen Drive, enabling users to upload **PDF/JPEG** receipts, with **OCR**-based extraction of bill data to auto-populate fields in the UI, minimizing manual data entry.

Lead Forge

- Designed and developed an end-to-end lead generation platform leveraging **web scraping (Requests, BeautifulSoup)** to collect structured business leads from multiple sources and **data cleaning** using **Pandas**, removing redundant and inconsistent entries.
- Integrated **external APIs (Emailable, Hunter)** to automate lead enrichment and validation, ensuring high-quality, actionable business contact data and reducing effort.

Awards

- **Procloz Rising Star Award 2025 (Annual Award)** - Honored for exceptional contributions to backend development, automations, and delivery of high-impact, production-ready projects within deadlines, driving efficiency and client satisfaction
- **ServTech Excellence Award** – Honored for delivering high-impact solutions, including payroll automation, lead generation.
