SUMMARY

Software Engineer with nearly 3 years of experience designing, developing, and maintaining Python-based backend solutions, APIs, and enterprise applications. Skilled in applying data structures and algorithms to optimize system performance, writing unit testing to ensure code reliability, and implementing CI/CD practices for automated deployment. Experienced in production support, incident analysis, monitoring, and logging to detect and resolve issues early. Hands-on with Django, Flask, microservices, and cloud platforms, with a focus on clean, maintainable code and modern engineering practices in Agile environments.

SKILLS

- Programming: Python, SQL
- Backend: Django, Flask, REST APIs,
Microservices, Backend Architecture
- AI & GenAI: LLMs, RAG, Prompt
Engineering, Embeddings, Vector Search,
AI-Assisted Development
- AI Frameworks: LangChain, LlamaIndex
- Databases: MySQL, SQL Server,
PostgreSQL, ORM
- Async & Automation: Celery,
APScheduler, Workflow Automation,
Excel Automation
- Data & Processing: Pandas, Web
Scraping, BeautifulSoup, Data Cleaning,
Data Validation, OCR
- Cloud & DevOps: Microsoft Azure, Azure
App Services, Docker, Git
- Security: JWT, RBAC, Authentication,
Authorization
- AI Development Tools: Cursor, Claude,
GitHub Copilot, ChatGPT
- Development Tools: VS Code, PyCharm

EDUCATION

Bachelor of Engineering – I.T.
RTM Nagpur University – 8.7 CGPA
Jul 2017 – Aug 2021

AWARDS

- Procloz Rising Star Award 2025 (Annual Award)
- ServTech Excellence Award - Dec 2024
- ServTech Excellence Award - Mar 2024

WORK EXPERIENCE

Software Developer

Manupatra formation Solutions Pvt Limited

- Built and enhanced Python-based solutions for legal research and document management workflows, contributing to development, debugging, testing, and data processing, and production support activities..
- Leveraged Claude and Cursor for AI-assisted development, code understanding, debugging, technical research, and documentation, improving development efficiency.

Python Developer

Procloz Services Pvt Ltd.

- Developed and maintained Flask-based web applications with attention to code quality through refactoring and modular design patterns, improving system efficiency and user experience.
- Automated lead generation and email workflows, reducing manual effort by 65%.
- Optimized database schemas and SQL queries, improving application responsiveness by 45%.

Associate Python Developer

Procloz Services Pvt Ltd.

- Designed and implemented a comprehensive HR services product with Django, integrating front-end and back-end functionalities for streamlined HR processes.
- Created Standard Operating Procedures (SOPs) for Azure deployment, facilitating smooth product launches and consistent deployment practices

PROJECTS

People – HR Tech Platform

- Developed core HR modules for employee onboarding/offboarding processing, and RBAC, enabling secure, role-specific access.
- Designed a modular Flask architecture separating routes, services, and utilities with code quality standards for maintainability; implemented unit testing for service layer modules and established CI/CD practices for automated deployment validation.
- Built an APScheduler-based notification system for automated daily/weekly web and email workflows.
- Developed an LLM/RAG-based HR knowledge assistant for retrieving relevant information from internal HR policies and documents.

PayGen – Payslip & Bank File Automation

- Developed a payroll automation platform covering Excel data processing, payslip generation, validation, and secure email delivery; implemented unit testing for validation modules and added logging to track data processing errors and support incident analysis.
- Built a bank payroll module generating compliant payroll XML files for international clients.
- Automated repetitive payroll workflows, reducing manual processing effort by ~40%.

Costen – Travel & Expense Management System

- Developed backend modules for expense submission, receipt processing, multi-level approvals, and automated reporting.
- Built Costen Drive, using OCR to extract receipt data from PDF/JPEG files and auto-populate expense fields, reducing manual data entry.
- Implemented validation and approval automation to improve finance workflow efficiency and expense accuracy.

LeadForge – Lead Generation Platform

- Built an end-to-end lead generation and enrichment platform using web scraping with Requests and BeautifulSoup.
- Implemented Pandas-based data cleaning and deduplication to improve lead quality and consistency.
- Integrated Hunter and Emailable APIs to automate lead enrichment and email validation.
